

Gravelrings overlay application is a different method of installing Gravelrings gravel retention system on old, existing driveways without the mess and cost of ground preparation work.

The tarmac or concrete driveway must be structurally sound to withstand the construction of a gravel driveway. The aim of this application is to transform worn, existing driveways into a beautiful gravel driveway to provide a more cost-effective solution to replacing these surface types, without sacrificing the performance of a traditional gravel driveway installation.

## Why use a Gravelrings overlay system?

Gravelrings overlay application removes the need to construct a sub-base, the grids are simply laid upon the existing surface, fixed in place with an electric nail gun and backfilled with gravel. This application is the perfect solution for clients who are discouraged about the aesthetic appeal of their existing driveway but don't have the spare income to upgrade their driveway using a traditional driveway application – whether that be tarmac, concrete or resin.

BEFORE

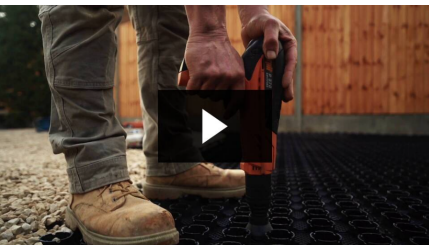

AFTER

As excavation work is not required there will be no need for you to factor in costs associated with removing and disposing of the excess soil. Similarly, time is saved as there will be no requirement to make any journeys to the tip.
